3. KNOW YOUR HOB

1

Glass surface of the appliance

2

Single plate

3

Dual oval plate

4

Dual round plate

The appliance features 4/5 cooking zones of different diameter and power. Their position is clearly indicated by circles and the heat given off is defined by the markings on the glass surface.. The 5 cooking zones are of the HIGH-LIGHT type and come on after a few seconds of being activated.

4. BEFORE FIRST USE

Do not leave the packing in the home environment. Separate the various waste materials and take them to the nearest special garbage collection centre.

When using for the first time, it is advisable to heat up the cooking hob to its maximum temperature for enough time so as to burn off any possible oily manufacturing residues, the smell of which could otherwise be absorbed by the food.

Remove all the removable label and any protective foils.

5. RESIDUAL HEAT

The 4 signal lamps located between the cooking zones come on when the temperature of one or more of the heating zones exceeds 60°C.

The lamps go off upon temperature dropping to below approximately 60°C.

The table below shows the power values which can be set, with the relative type of food alongside. Setting may vary depending on the amount of food and personal taste.

KNOB SETTING	NUMBER ON THE DISPLAY	TYPE OF FOOD
1	1	To melt butter, chocolate, and the like.
2	2-3	To heat food, keep small amounts of water on the boil, and whip up sauces with egg yolk or butter.

6	9	To deep-fry potatoes, etc and to quick-boil water.

For best results and energy saving, only use receptacles suitable for electric cooking:

- The bottom of the receptacles must be very thick and perfectly flat; before placing on the cooking hob, make sure that it, as well as the cooking hob itself, are perfectly clean and dry.
- To avoid scratching of the cooking hob, never use cast-iron receptacles or receptacles with a rough bottom.
- To avoid waste of energy, make sure that the diameter of the receptacle bottom is the same as that of the circle marked on the cooking hob.

7. CLEANING AND MAINTENANCE

Before any intervention, disconnect the power supply of the device.

7.1 Cleaning the glazed ceramic hob

The cooking hob should be regularly cleaned; best after every use, once the residual heat signal lamps have gone off.

Smudges from aluminium-bottom pans can be easily cleaned off with a cloth dampened in vinegar.

Remove any burnt residues after cooking with the scraper provided; rinse with water and wipe dry with a clean cloth. Regular use of the scraper considerably reduces the need for chemical detergents for the daily cleaning of the hob.

Never use abrasive or corrosive detergents (e.g. cleaning powders, oven sprays, spot-removers, wire sponges).

NEVER USE A STEAM JET TO CLEAN THE APPLIANCE.

9.4 POSITIONING OF THE HOB

The following operation requires building and/or carpentry work so must be carried out by a competent tradesman.

Installation can be carried out on various materials such as masonry, metal, solid wood or plastic laminated wood as long as they are heat resistant (T 90°C).

Create an opening with the dimensions shown in the figure in the top surface of the counter, keeping a minimum distance of 50 mm from the rear border.

This appliance can be mounted against walls higher than the work surface on condition that a certain distance "X" be kept between the appliance and the wall as shown in the figure so as to avoid damage from overheating.

Make sure there is a minimum of **750 mm** between the hob and any shelf that may be installed directly above them.

9.5 Mounting

Before mounting the device to the unit, lay the provided adhesive sponge onto the glass surface to separate it from the unit.

After fixing the provided adhesive sponge (**B**) to the glass, mount the device to the unit with the mounting brackets (**A**) provided with the device itself, as shown in the figure.
